

PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience delivering operational insights and building scalable KPI-driven reporting solutions across healthcare, and sales domains. Proficient in SQL, Python, and Power BI to analyse large-scale operational datasets, uncover trends, and drive measurable process improvements and optimisation. Completed MSc in Data Analytics from National College of Ireland, Dublin.

SKILLS & EXPERTISE

Programming Language: Python (NumPy, Pandas, Matplotlib)
Databases: MySQL, PostgreSQL (Joins, Window Functions, Query Optimization)
BI & Visualization: Power BI, Tableau Advanced Excel (Pivot Tables, Lookups (VLOOKUP/XLOOKUP))
Cloud: AWS, GitHub
Data Analytics Strategy: KPI & SLA Reporting, Trend & Performance Analysis, Root Cause Analysis, Enterprise Reporting, Stakeholder Engagement
Statistics: Descriptive and Inferential Statistics, Hypothesis Testing, Correlation and Regression Analysis

WORK EXPERIENCE

Data Analyst, Infosys ltd.

Nov 2022 – Dec 2024

- Analysed 1,000+ operational access records quarterly for a multinational semiconductor client using Excel, identifying risk trends and patterns that reduced repeated access requests by 20%.
- Developed and maintained structured Power BI reporting frameworks tracking 5-10 operational KPIs, improving visibility across teams and enabling faster, more consistent decision-making for senior stakeholders.
- Analysed operational data within Netskope cloud security tool to identify workflow inefficiencies, implementing 10+ standardised policies that reduced manual approval processing time by 20%.
- Translated weekly operational data into concise executive reports for 3 client stakeholders, saving 5+ hours per week across teams
- Collaborated with a cross-functional team of 5-10 members to monitor operational trends, conduct root cause analysis on recurring issues, and implement data-backed process improvements.

PROJECTS

Business Intelligence & Customer Analytics Platform - Volt Metrics

- Built Power BI dashboards with DAX measures and executed customer segmentation identifying four high-value segments, reducing manual reporting by 40% and boosting client response rates by 15-20%.
- Analyzed 80,000+ sales transactions and 7,000+ customer records using SQL and Python to uncover revenue drivers and client purchasing behavior patterns, informing CRM and business strategy.

Phishing Detection Using Explainable AI and Transformer-Based Approach.

- Examined 11,000+ real-world URLs to identify behavioral and structural indicators of phishing activity, improving early risk identification, using data pre-processing, feature analysis, and EDA.
- Developed a hybrid phishing detection pipeline using RoBERTa embeddings and machine learning models, achieving 97% accuracy and <1% false negatives through statistical evaluation.

Healthcare Data Analytics Drug Spending and Facility Analysis.

- Analyzed large-scale healthcare datasets to uncover drug spending patterns and facility-level trends; segmented drugs into 4 cost-based clusters and identified high-cost outliers for cost-control analysis.
- Developed classification models to evaluate nursing facility characteristics, informing data-driven organizational decision-making using Logistic Regression and Random Forest techniques.

EDUCATION

National College of Ireland, Dublin, Ireland, MSc Data Analytics

Jan 2025 – Jan 2026

SPPU, Pune, India, B.E Computer Science & Engineering

Aug 2019 – Aug 2022
